and 64 bit windows SDK and install windows phone emulator Next go to your powershell Open the console, and type: cd C:\Program Files\WindowsPhone80\Emulator On the desktop open the command window and type in the following: Now just type .emulator.exe and press enter. you will get the Emulator. You will notice the Setup is setup with a long list of options as this is the default setup and you have the option to setup individual components and target different versions of Windows OS, Phone OS, and Emulator (Also known as Versions). Setup can be changed to be a short form where you can choose an easy option by just typing the number to the left of the option. For example: .emulator.exe -install -all -userdata "C:\Users\Administrator\Desktop\windowsphone.tx" would setup a wp8 phone emulator with just the a default look and feel. A: You could use the Windows Phone SDK's emulator and this is a step-by-step guide: Windows Phone Emulator Setup Tutorial: You could also use the tool Microsoft provided: Vacuum cleaning systems are commonly employed to remove particles, dust, and other debris from floors, stairways, and other flooring surfaces. Many conventional vacuum cleaning systems are hand-held or have a wheeled base which is maneuvered over the floor surface to be cleaned. When maneuvering the vacuum cleaner over the floor, a user typically needs to repeatedly stoop over in order to free one hand to operate the vacuum cleaner, while the other hand tends to hold the vacuum cleaner and to manipulate the vacuum cleaner wheels. After a few minutes of such repeated stooping, the user can feel neck pain, shoulder pain, and back pain. It is desirable to create a vacuum cleaning system that is self-propelled and is not required to be maneuvered over the floor surface during cleaning, so that such repeated stooping can be avoided.
